PROFESSIONAL SUMMARY

I am a software engineer/developer that graduated from Turing School of Software & Design and my goal is to create my own video game one day. Until then, I strive to grow and continue to expand my knowledge to become the best developer I can be. I am very flexible when it comes to new environments and as well as picking new technologies quickly. I currently have about 2000+ hours in coding doing projects on my own time.

SKILLS

Languages/Frameworks: Ruby on Rails, SQL, HTML, CSS, Python, JavaScript

Tools: ActiveRecord, PostgreSQL, TDD, Rspec, Minitest, Git

Methodologies: Git Workflow, Microservices

PROJECTS

RELOCATE
https://github.com/orgs/Relocate08/dashboard

- This was a group project of about 10 people, splitting the project into 3 different portions. The first is the front-end, then the back-end, and finally the micro-service.
- The app helped users move to a new location more simple by providing them with utilities, and other service locations around them.

VIEWING PARTY
https://github.com/SageOfCode/viewing_party

- Created an app that consumed an API of a movie database
- It allowed a user to make an account, with this they are able to add other users as friends. Users are able to create viewing parties for a specific movie and invite their friends in order to watch the movie together
- For our tech stack we used ruby on rails

PACK SMART
https://github.com/Pack-Smart

- This was the first project during Turing that we worked with the students from the front-end program
- We created a website that allowed you to make a packing list to make it easier to get everything you need before a trip
- We created our own API that had pre-built list with overall items you would need. And also allowed users to add there own custom items
- The back-end decided to use python with flask instead of rails to do this project

PROJECTS CONT.

BLACKJACK

https://github.com/kevxo/blackjackv2

- I worked on this project during a hackathon with 2 of my good friends
- We created blackjack the game for a hackathon and did it with react rails in order to do a front-end
- We ran to a problem midway through the project were we had to basically create a new repository so sadly our contributions are all over the place
- We decided to do the project in rails with react and use Material UI but when we restarted midway we changes to Bootstrap

PERSONAL WEBSITE

https://github.com/JoseLopez235/personal_site

- I am creating a personal website or a portfolio in order to make it easier for others to see my work and get my information
- This is all front-end using JavaScript with React and Material UI for the code
- Always adding more things to the website every time I gain new skills or do new projects

EDUCATION

AUGUST 2020 - MARCH 2021

Back-End Developer

TURING SCHOOL OF SOFTWARE & DESIGN

- 1,500 experienced hours of programming while in Turing
- Worked on many real-world applications in rails, ReactJS

CAREER

2018 - 2019

Sales Associate

HOMEDEPOT

- Consistently met sales quotas for the month
- Adapted to any situation or position they put me in
